

TOMES SYSTEM

**TOKSIKOLOŠKA BAZA
PODATAKA**

Dijana Krišto, dr.med.

*Dijana Poplašen Orlovac, dr.med., spec.medicine rada i športa
dr.sc. Bojana Kneževi , dr.med., spec.medicine rada*

TOMES system

- dio Healthcare business Thomson Reuters-a - baze podataka i softverska rješenja iz područja zdravstva
- pomaže u procjeni i primjeni rješenja pri izloženostima, kemijskim rasipanjima, eksplozijama...
- “user-friendly” baza podataka o industrijskim kemikalijama

TOMES system

- Brz i jednostavan pristup informacijama:
 - iz područja medicine
 - o štetnosti
 - za sigurno rukovanje kemikalijama na radnom mjestu
- Služi za procjenu:
 - izloženosti,
 - brze reakcije u slučaju hitnosti i
 - usklađenosti sa zakonodavstvom
- Uključuje:
 - smjernice za liječenje kod akutne izloženosti, smjernice za liječenje kod dugotrajne izloženosti kao i utjecaj dugotrajne izloženosti kemikalijama na zdravlje pojedinca
 - postupke pri evakuaciji i
 - informacije o uklanjanju kemikalija i zaštitnim sredstvima

➤ DAJE KLJUČNE PODATKE ZA ODRŽAVANJE I VOĆENJE SIGURNIH I ZDRAVIH RADNIH PROSTORA/MJESTA

Dva izvora informacija / dokumenta:

MEDITEXT - pomo pri:

- procjeni i lje enju akutne izloženosti industrijskim kemikalijama
- izvješivanju o potencijalnim neželjenim učincima na zdravlje u slučaju dugotrajne izloženosti

• HAZARDTEXT

- prikazuje podatke potrebne za početni (inicijalni) odgovor na incidente kao što su rasipanja (prskanja), istjecanja i požari koji uključuju opasne materijale
- pruža podatke o toxicnosti, utjecaju na okoliš i onečišćenju
- daje smjernice za evakuaciju, uklanjanje kemikalija i osobnu zaštitu

MEDITEXT dokument uključuje sljedeće dijelove:

- *osvrt*
- *sadržane supstance i sinonime*
- *kliničke posljedice izloženosti* (popisane po organskim sustavima)
- *medicinski nadzor/laboratorijsku procjenu*
- *izvješta o dosadašnjim slučajevima*
- *postupanje s izloženim pojedinicima* (organizirano prema načinu (putu) izloženosti)
- *raspon toxicnosti*
- *kinetika*
- *farmakologija/toksikologija*
- *standardi i označavanja*
- *fizikalno-kemijski parametri*
- *reference*

COBALT

0.0 OVERVIEW

[LIFE SUPPORT](#)

[CLINICAL EFFECTS](#)

[MEDICAL SURVEILLANCE/LABORATORY](#)

[TREATMENT OVERVIEW](#)

[RANGE OF TOXICITY](#)

0.1 LIFE SUPPORT

- A) This overview assumes that basic life support measures have been instituted.

0.2 CLINICAL EFFECTS

0.2.1 SUMMARY OF EXPOSURE

0.2.1.1 ACUTE EXPOSURE

- A) The classic toxidrome of chronic soluble cobalt poisoning is the tetrad of goiter, polycythemia, cardiomyopathy, and metabolic acidosis.
- B) INHALATION - Occupational inhalation exposure to metallic cobalt or cobalt alloys, usually produces cough, dyspnea, wheezing, asthma, or interstitial fibrosis ("hard metal disease"). Fume exposure can cause conjunctivitis and rhinitis.
- C) DERMAL - "Cobalt itch" or "carboloy-itch" (an allergic erythematous papular eruption) may occur.
- D) ORAL - "Beer drinker's cardiomyopathy" with frequent pericardial effusions have been described. Ingestion of cobalt can cause nausea, vomiting, and diarrhea. Ingestion of cobalt causes stimulation of the bone marrow and blood-forming components, resulting in polycythemia.
- E) PARENTERAL - Rhabdomyosarcomas have been found in rats following intramuscular injections.
- F) This management does not deal with potential clinical effects or treatment of radiation injury from radioactive cobalt isotopes. IF EXPOSURE TO RADIOACTIVE ISOTOPES OF COBALT HAS OCCURRED - refer to RADIATION MANAGEMENT for further information.

0.2.1.2 CHRONIC EXPOSURE

- A) Polycythemia, hematuria, and goiter have been described following chronic exposure.

0.2.5 CARDIOVASCULAR

0.2.5.1 ACUTE EXPOSURE

- A) Cardiomyopathy is commonly reported as part of the cobalt toxidrome.

0.2.6 RESPIRATORY

0.2.6.1 ACUTE EXPOSURE

- A) An interstitial fibrotic pulmonary process has been described among "hard metal" workers and diamond polishers.
- B) Wheezing, cough, and shortness of breath may occur.

0.2.8 GASTROINTESTINAL

0.2.8.1 ACUTE EXPOSURE

- A) Ingestion or inhalation of cobalt causes nausea, vomiting, diarrhea, and colicky abdominal pain.

0.2.11 ACID-BASE

0.2.11.1 ACUTE EXPOSURE

- A) Metabolic acidosis has been reported as part of the cobalt toxidrome.

0.2.13 HEMATOLOGIC

0.2.13.1 ACUTE EXPOSURE

- A) Polycythemia is commonly reported as part of the cobalt toxidrome.

0.2.16 ENDOCRINE

0.2.16.1 ACUTE EXPOSURE

- A) Goiter is commonly seen as part of the cobalt toxidrome.

0.2.20 REPRODUCTIVE HAZARDS

1.3 SYNONYM REFERENCE

- A) (HSDB , 2000; Lewis, 1996; RTECS , 2000)

1.4 USES/FORMS/SOURCES

- A) USES
 - 1) Cobalt is used in the manufacture of extremely hard steel and cutting tools (Lewis, 1998). It is also used in cemented carbide cutting tools, jet engines, as a coordination and complexing agent (Ashford, 1994; Lewis, 1997) ITI, 1994; (Lewis, 1998). Together with nickel, aluminum, copper, beryllium, chromium and molybdenum, cobalt is utilized in the electrical, automobile, aircraft and other industries (Sittig, 1991).
 - 2) Cobalt is used in the manufacture of chemicals (cobalt salts); in alloys; cobalt steels for permanent magnets (in telephones, magnetic tape, microphones, speakers, computers, and motors) and for soft magnets and high-speed tool steels; in nuclear technology; and as oxidizing agent (ACGIH, 1996; (Budavari, 1996; ITI, 1995; Lewis, 1997). This metal is a constituent of stellite alloys (used for extrusion dies, turbine blades, and valve seats) of super alloys, and of magnetic cobalt-rare earth alloys (Ashford, 1994).

TOMES SYSTEM - TOKSIKOLOŠKA BAZA PODATAKA

- pristup bazi - samo preplaćeni korisnici
- Hrvatski zavod za zaštitu zdravlja i sigurnost na radu (HZZZSR) preplaćeni je korisnik TOMES baze podataka
- cilj HZZZSR-a - omogućiti dostupnost podatcima iz baze što većem broju zainteresiranih strana o kroniknim učincima dugotrajne izloženosti niskim koncentracijama štetnih kemijskih tvari
- predložak će biti dostupan na <http://www.hzzzsrsr.hr/>

Hvala na pažnji

Hrvatski zavod za zaštitu zdravlja i sigurnost na radu
Radoslava Cimermana 64a, Zagreb
